

1. How do genes and environment interact to influence behavior?
  - A. Genes influence behavior and environment does not.
  - B. Environment influences behavior and genes do not.
  - C. Genes and environment both influence behavior.
  - D. Genes and environment neither influence behavior.
2. How do heritable and non-heritable factors interact to influence behavior?
  - A. Heritable factors influence behavior and non-heritable factors do not.
  - B. Non-heritable factors influence behavior and heritable factors do not.
  - C. Heritable and non-heritable factors both influence behavior.
  - D. Heritable and non-heritable factors neither influence behavior.
3. How do nature and nurture interact to influence behavior?
  - A. Nature influences behavior and nurture does not.
  - B. Nurture influences behavior and nature does not.
  - C. Nature and nurture both influence behavior.
  - D. Nature and nurture neither influence behavior.
4. Which of the following is an example of how genes can influence behavior?
  - A. A person's hair color is determined by their genes.
  - B. A person's eye color is determined by their genes.
  - C. A person's height is determined by their genes.
  - D. All of the above.
5. Which of the following is an example of how environment can influence behavior?
  - A. A person's hair color is determined by their environment.
  - B. A person's eye color is determined by their environment.
  - C. A person's height is determined by their environment.
  - D. All of the above.
6. Which of the following is an example of how heritable factors can influence behavior?
  - A. A person's hair color is determined by their heritable factors.
  - B. A person's eye color is determined by their heritable factors.
  - C. A person's height is determined by their heritable factors.
  - D. All of the above.
7. Which of the following is an example of how non-heritable factors can influence behavior?
  - A. A person's hair color is determined by their non-heritable factors.
  - B. A person's eye color is determined by their non-heritable factors.
  - C. A person's height is determined by their non-heritable factors.
  - D. All of the above.
8. Which of the following is an example of how nature can influence behavior?
  - A. A person's hair color is determined by their nature.
  - B. A person's eye color is determined by their nature.
  - C. A person's height is determined by their nature.
  - D. All of the above.

9. Which of the following is an example of how nurture can influence behavior?

- A. A person's hair color is determined by their nurture.
- B. A person's eye color is determined by their nurture.
- C. A person's height is determined by their nurture.
- D. All of the above.

10. Which of the following is true about the influence of genes and environment on behavior?

- A. Genes have a greater influence on behavior than environment.
- B. Environment has a greater influence on behavior than genes.
- C. Genes and environment have an equal influence on behavior.
- D. It is impossible to say how great of an influence genes and environment have on behavior.

Answer Key:

- 1. C
- 2. C
- 3. C
- 4. D
- 5. D
- 6. D
- 7. D
- 8. D
- 9. D
- 10. D
