 - a. It can help you manage your computer system more effectively.
 - b. It can help you manage your network more effectively.
 - c. It can help you manage both your computer system and your network more effectively.
 - d. It can help you manage neither your computer system nor your network more effectively.
5. Which of the following is not a benefit of using a network management system?
 - a. It can help you manage your computer system more effectively.
 - b. It can help you manage your network more effectively.
 - c. It can help you manage both your computer system and your network more effectively.
 - d. It can help you manage neither your computer system nor your network more effectively.

6. Which of the following is the best way to manage computer systems and networks?
- a. By using a computer management system
 - b. By using a network management system
 - c. By using both a computer management system and a network management system
 - d. By using neither a computer management system nor a network management system
7. Which of the following is the best way to manage networks?
- a. By using a computer management system
 - b. By using a network management system
 - c. By using both a computer management system and a network management system
 - d. By using neither a computer management system nor a network management system
8. Which of the following is the best way to manage computer systems?
- a. By using a computer management system
 - b. By using a network management system
 - c. By using both a computer management system and a network management system
 - d. By using neither a computer management system nor a network management system
9. Which of the following is the best way to manage both computer systems and networks?
- a. By using a computer management system
 - b. By using a network management system
 - c. By using both a computer management system and a network management system
 - d. By using neither a computer management system nor a network management system
10. Which of the following is the best way to manage neither computer systems nor networks?
- a. By using a computer management system
 - b. By using a network management system
 - c. By using both a computer management system and a network management system
 - d. By using neither a computer management system nor a network management system

Answer Key:

1. c

2. c

3. c

4. d

5. d

6. c

7. b

8. a

9. c

10. d
