

1. What is the definition of equilibrium?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
2. What is the definition of a dynamic equilibrium?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
3. What is the definition of a chemical equilibrium?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
4. What is the definition of an equilibrium constant?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
5. What is the definition of a reaction quotient?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
6. What is the definition of a Le Chatelier's principle?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
7. What is the definition of a catalyst?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
8. What is the definition of an endothermic reaction?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
9. What is the definition of an exothermic reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

10. What is the definition of activation energy?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

11. What is the definition of a reaction rate?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

12. What is the definition of a half-life?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

13. What is the definition of a first-order reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

14. What is the definition of a second-order reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

15. What is the definition of a third-order reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

16. What is the definition of an Arrhenius acid?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

17. What is the definition of an Arrhenius base?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs

- C. A state of maximum disorder
- D. A state of minimum potential energy

18. What is the definition of a Bronsted-Lowry acid?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

19. What is the definition of a Bronsted-Lowry base?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

20. What is the definition of a Lewis acid?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

21. What is the definition of a Lewis base?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

22. What is the definition of an acid-base reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

23. What is the definition of an acid-base titration?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

24. What is the definition of a buffer?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

25. What is the definition of a buffer solution?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

1. What is the definition of equilibrium?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
2. What is the definition of a dynamic equilibrium?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
3. What is the definition of a chemical equilibrium?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
4. What is the definition of an equilibrium constant?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
5. What is the definition of a reaction quotient?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
6. What is the definition of a Le Chatelier's principle?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
7. What is the definition of a catalyst?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
8. What is the definition of an endothermic reaction?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
9. What is the definition of an exothermic reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

10. What is the definition of activation energy?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

11. What is the definition of a reaction rate?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

12. What is the definition of a half-life?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

13. What is the definition of a first-order reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

14. What is the definition of a second-order reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

15. What is the definition of a third-order reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

16. What is the definition of an Arrhenius acid?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

17. What is the definition of an Arrhenius base?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs

- C. A state of maximum disorder
- D. A state of minimum potential energy

18. What is the definition of a Bronsted-Lowry acid?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

19. What is the definition of a Bronsted-Lowry base?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

20. What is the definition of a Lewis acid?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

21. What is the definition of a Lewis base?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

22. What is the definition of an acid-base reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

23. What is the definition of an acid-base titration?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

24. What is the definition of a buffer?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

25. What is the definition of a buffer solution?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

1. What is the definition of equilibrium?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
2. What is the definition of a dynamic equilibrium?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
3. What is the definition of a chemical equilibrium?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
4. What is the definition of an equilibrium constant?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
5. What is the definition of a reaction quotient?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
6. What is the definition of a Le Chatelier's principle?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
7. What is the definition of a catalyst?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
8. What is the definition of an endothermic reaction?
 - A. A state of balance between opposing forces
 - B. A state of change in which no net change occurs
 - C. A state of maximum disorder
 - D. A state of minimum potential energy
9. What is the definition of an exothermic reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

10. What is the definition of activation energy?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

11. What is the definition of a reaction rate?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

12. What is the definition of a half-life?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

13. What is the definition of a first-order reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

14. What is the definition of a second-order reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

15. What is the definition of a third-order reaction?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

16. What is the definition of an Arrhenius acid?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

17. What is the definition of an Arrhenius base?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs

- C. A state of maximum disorder
- D. A state of minimum potential energy

18. What is the definition of a Bronsted-Lowry acid?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state of maximum disorder
- D. A state of minimum potential energy

19. What is the definition of a Bronsted-Lowry base?

- A. A state of balance between opposing forces
- B. A state of change in which no net change occurs
- C. A state
